The pins are meant to be assembled into individual anatomic scenes. Assembling the images is based on the real-world anatomical model that is enhanced with color-coded parts. The app allows for real-time 3D reconstruction (scanning) and 3D printing of anatomies. The app enables residents and medical students to use common 3D printing applications like 3D printing on their smartphones or tablets. This review is based on the Google Playstore search for "Sobotta Anatomy" and "Sobotta Anatomy Atlas". Searching the App Store is beyond the scope of this work. 2. Methods [sec2-ijerph-17-01395] ----- This article is a systematic review and the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) recommendations were followed. A database of all eligible studies was created. Abstracts and articles were reviewed by the authors for eligibility. The following criteria were used to select studies: Inclusion:Adult population (≥18 years old)Design:Quantitative, qualitative or mixed methods, no single-group pre- and post-test studiesParticipants:Patients undergoing rehabilitationInterventions:Teaching of anatomy using 3D printing of human body partsPublished in English language from January 2007 to January 2019. Studies were excluded if they were not in English language, they did not use 3D printing of human body parts as a component of the teaching intervention and/or if they did not describe a quantifiable outcome. The search was conducted using the databases of CINAHL, ProQuest, PubMed, Embase, Scopus, Health Evidence, Sage Journals, Google Scholar, The Cochrane Library and Wilson. Quality assessment of studies was based on the Mixed Methods Appraisal Tool [18-ijerph-17-01395]. Data were extracted and compiled using EPPI-Reviewer software (Version 5) [19-ijerph-17-01395]. 3. Results [sec3-ijerph-17-01395] 3.1. Search Results [sec3dot1-ijerph-17-01395] ----- The search strategy identified 32,018 articles from databases. Following the removal of duplicates and articles not meeting the inclusion 82157476af
